

Magpul® AFG™ 1913 Picatinny Rail-Mounted Angled Fore-Grip

NEWSFEED: Magpul AFG (Angled Fore-Grip)

The Magpul AFG (Angled Fore-Grip) is a rail-mounted forward grip/index point designed to improve weapon ergonomics and increase shooter speed and efficiency. Unlike conventional vertical fore-grips, the AFG takes into account natural body mechanics to provide a comfortable and stable user interface, reducing fatigue and allowing for more precise weapon control. By positioning the shooter's hand high on the center line of the bore, the AFG helps mitigate recoil, facilitating faster, more accurate follow-up shots.

Theory Based Products:

In contrast to traditional weapon accessories, Magpul Theory Based Products require a greater degree of instruction and training to be properly utilized. Only with a clear understanding of the concepts that facilitated product development will a shooter fully realize the benefits they provide. The Magpul products included in this category are the AFG, BAD Lever, MS2 Sling, and ASAP Plate.

Features Explained:

ANTI-SLIP TEXTURE

Aggressive anti-slip textured surfaces provide positive grip in adverse conditions.

ERGONOMICS

Taking into account natural body mechanics, the shape and angle of the AFG improve weapon control, help mitigate recoil, and reduce shooter fatigue.

INTERCHANGEABLE INSERTS

Two interchangeable inserts allow "A2" style finger bump or "A1" style flat textured surface depending on shooter preference.
