

ProMag Industries came out with a new AR-15 9mm 32-round polymer magazine.

BushMaster Firearms International, LLC. Provides this magazine with their 9mm Pistol & Carbines. See picture below.

Our standard COLT SMG **LULA™** loader/unloader fits and works well with this magazine (apart from loading the first round).

Setback:

Since the magazine's catch (female) of the new ProMag mag. is made of polymer, and since the Colt **LULA™** uses an internal metal lock insert, the top edge of the magazine's catch may be rounded-off by the metal insert of the **LULA™** sliding on it, and therefore the loader may slip away prematurely from the magazine.

This may happen to the magazine after loading it 50-100 times (1,500 - 3,000 rounds).

Solution:

When attaching the **LULA™** on this magazine, slightly lift the Lock-Tongue of the **LULA™** so it will move over the top edge of the magazine's catch, and not slide on it.

When detaching the **LULA™** from the magazine, push the **LULA™** down on the magazine so that the metal lock insert of the **LULA™** will be down away from the top edge of the magazine's catch (female), and lift the **LULA™** up while at it. i.e. make the metal lock insert of the **LULA™** move over the magazine's catch and not slide on it.

Following these instructions may reduce the rounding-off of the top edge of the magazine's catch, but may not eliminate it completely.

Regularly inspect the magazine's catch of the ProMag polymer magazine, and prefer using the original COLT'S MFG. 9mm metal magazines.
